

CAPYVERSE

Stay Chill. Explore Everything. | Whitepaper v0.1 | Pre-launch draft

01 — Executive Summary

Capyverse (CPV) is a proposed community meme token on Base. This document is a pre-launch draft, not an offer or promise of investment returns.

02 — Vision and Mission

Captain Capy travels across a playful fictional multiverse. The mission is to create a recognizable character and transparent community creative space.

03 — The Capyverse Story

Planet Chill sent Captain Capy to explore the noisy crypto galaxy. Every stop produces art, jokes and cosmic postcards; the community co-creates the lore.

04 — Market Context

Meme tokens are highly speculative, volatile and vulnerable to scams, thin liquidity and market manipulation. Cultural participation is the proposed focus.

05 — Blockchain Architecture

Base is an EVM-compatible Ethereum Layer 2. CPV is planned as a standard OpenZeppelin ERC-20 with one-time fixed supply mint and no privileged mint, blacklist or transfer tax.

06 — Tokenomics

Fixed proposed supply: 1,000,000,000 CPV. Community 40%; liquidity 30%; marketing 12%; development 10%; team 8%. These are plans, not on-chain allocations.

07 — Distribution and Vesting

Team: 12-month cliff then 24-month linear vesting. Marketing: 6-month cliff then 18-month linear vesting. Development: 6-month cliff then 24-month linear vesting. Independent vesting and LP custody contracts

remain to be selected and tested.

08 — Security and Transparency

Publish verified token address, contract source, treasury multisig, distribution wallet balances, vesting contracts, liquidity terms and audit status accurately. No independent audit has occurred.

09 — Community Strategy

Prioritize original memes, art challenges, lore contributions, transparent moderation and honest creator disclosures. Avoid bots, wash trading and manufactured volume.

10 — Roadmap

Phase 1: code and design; Phase 2: community; Phase 3: launch after verification and reviews; Phase 4: optional creative ecosystem. All phases are planned, not guaranteed.

11 — Ecosystem Development

Potential future features include sticker packs, collectible digital art and a community lore gallery. No feature should be described as operational until shipped.

12 — Risks and Disclaimers

CPV could lose all market value. Smart-contract, bridge, custody, regulatory, tax, liquidity and cyber-security risks apply. Nothing in this paper is financial or legal advice.

13 — Official Links

Official token address, DEX pool, X, Telegram and Discord: NOT YET CONFIRMED. Only use links published after independent verification.
